

The *AeroChamber MAX*® Valved Holding Chamber (VHC) is designed specifically for the smallest patients.

Below, please find abbreviated instructions, but please remember to read the instructions that are packaged with your *AeroChamber MAX*® VHC device.

- 1** Remove the cap from the MDI. Shake the MDI immediately before each use.
- 2** Insert the MDI into the back-piece of the *AeroChamber MAX*® VHC.
- 3** Apply mask to the face to ensure an effective seal. The *Flow-Vu*® Inspiratory Flow Indicator (IFI) only moves if the patient has a good seal.
- 4** Breathe out gently and depress the MDI at the beginning of a slow inhalation. Use the *Flow-Vu*® IFI to assist in the coordination of this maneuver. Maintain seal for 5-6 breaths after the MDI is depressed. Administer one (1) puff at a time.
- 5** Follow instructions supplied with the MDI on how long to wait before repeating steps 1-4 as prescribed.

Remember to read the instructions that accompany your new **AeroChamber MAX® VHC!**

Cleaning Instructions:

The **AeroChamber MAX®** VHC should be cleaned weekly, following the instructions provided on the instructional insert that is packaged with the **AeroChamber MAX®** VHC.

-Remove the Backpiece and the Adapter Assembly. *Do not disassemble the product beyond what is recommended or damage may result.*

-Soak the parts for 15 minutes in a mild solution of liquid dish detergent and lukewarm water. Agitate gently. Rinse parts in clean water.

-Shake out excess water from the parts and allow to air dry in a vertical position. *Ensure parts are dry before reassembly.*

-To reassemble, fit the Adapter Assembly on the end of the chamber and twist firmly until securely locked into position.

-Center the Alignment Feature on the Backpiece with the **Flow-Vu®** IFI. Press firmly to attach the Backpiece.
